### How to Test Out Shoe Values.

In Walk-Over shoes you can see two left shoes (or two right shoes) side by side.

One is a Walk-Over \$3.50. The other is a Walk-Over \$5.00.

Each is stamped on the sole with the makers' price, up to which wear comfort and satisfaction to consumer are guaranteed.

There is the full difference of \$1.50 in retail value between these two pairs of Walk-Over shoes.

But you can't tell (without looking at the price on the sole) which is \$3.50 shoe and which is the \$5.00 shoe.

And if you can't tell the difference (through the finish). How are you to know values in shoes that are not price controlled by the makers (through their valuation being stamped on the soles at the factory)?

Ninty per cent of all other shoes are today sold on their mere outward appearance.

That appearance is largely a matter of lasting and finish quite independent of material or service to consumer hidden under the finish.

But Walk-Over shoes are stamped on the sole of each pair indelibly with the retail price which the makers guarantee will give full value every time.

You run no risk of paying \$4.50 to \$5.00 for a \$3.50 shoe (with a \$5.00 finish) if you make sure that this Walk-Over brand is stamped on the sole with the Walk-Over price.
